The Relationship between Length of Time in Care and Outcomes for Children in Campus-based Care

In partnership with Hull Services

CARe RTP Students: Alexe Bernier, Kayla Kirby, Janelle Lee, Yitong Wang
Hull Services: Dr. David Lindenbach and Natalia Zaharia
CARe Team: Dr. Melissa Kimber, Dr. Tracie Afifi, Dr. Ashley Stewart-Tufescu, Lauren MacGowan

The Context

- Hull Services provides **campus-based care programming for children and youth involved with the child welfare system** across Calgary and other parts of Alberta.

  Many youth are placed in the program after multiple unsuccessful kin or foster placements.

- These programs offer **24-hour care and therapeutic services from the moment of arrival through discharge**, with the goal of supporting those young people to safely reintegrate into their communities.

- Relatively **few studies have examined the factors that predict length of stay in campus-based care programs** and how this duration contributes to the overall utilization of campus-based care.

Objective

1 To conduct a retrospective secondary data analysis examining factors contributing to program length and outcomes of campus-based programs for children aged 4–17.
